Education and qualifications

Each row of the table is one entry, and each column is a field on it. Columns keep their own heading, so `fields` is only needed where that heading is not the one the style expects. It is written new: `old, like dplyr::rename()`.

1988 **B.Sc.(Hons)**, University of Melbourne

1992 **Ph.D.**, University of Melbourne

2000 **A.Stat.**, Statistical Society of Australia

Employment history

The `brief` style is a single line per entry: the years at the left, and the role beside them. what is set in bold, and with follows it in plain text.

2026– **Vice-Chancellor's Distinguished Professor**, Department of Econometrics & Business Statistics, Monash University

2003–2026 **Professor**, Department of Econometrics & Business Statistics, Monash University

2016 **KNAW Visiting Professor**, TU/Eindhoven, Netherlands

2001–2003 **Associate Professor**, Department of Econometrics & Business Statistics, Monash University

1998–2000 **Senior Lecturer**, Department of Econometrics & Business Statistics, Monash University

1995–1996 **Lecturer**, Department of Mathematics and Statistics, Monash University

1993–1994 **Lecturer**, Department of Statistics, University of Melbourne

Academic and research leadership

A grid table can hold a bullet list in a cell, so why carries several points per entry. The `detailed` style sets those as a bulleted elaboration under the entry. Here the headings already match, and no `fields` is needed.

2019–2022 **Head**

- Department of Econometrics & Business Statistics, Monash
- Led a department of over 70 academic staff

2001–2017 **Director**

- Business & Economic Forecasting Unit, Monash

Editorial boards

Markdown inside cells is preserved, and LaTeX special characters are escaped for you, so *emphasis* and a literal 100% both come out right. what is already set in bold by the style, so `*emphasis*` reads more clearly than `**bold**` would.

2023–2026 **Executive Editor**, *The R Journal*

2011–2024 **Editor**, *Journal of Statistical Software*

2005–2018 **Editor-in-Chief**, *International Journal of Forecasting*

2001–2004, 2019– **Associate Editor**, *International Journal of Forecasting*

1996–2001 **Book Review Editor**, *Australian Journal of Statistics*

Selected awards and honours

2021 **Pitman Medal**, Statistical Society of Australia

2021 **Fellow**, International Institute of Forecasters

2021 **Fellow**, Australian Academy of Science

2020 **Fellow**, Academy of the Social Sciences in Australia

2007 **Moran Medal for Statistical Science**, Australian Academy of Science

Research interests

The `skills` style pairs a category with its members, written either as one string in `with` or as a list in `why`.

Methods Forecast reconciliation, Functional time series, Anomaly detection, Time series visualisation

Applications Electricity demand, Demography, Tourism

Software R, Rcpp, Stan

Grants

Where the data already lives in a data frame, the same options are given as cell options instead, and the cell prints a table for the filter to pick up. See the README for that form.

2019–2024 **Australian Research Council Discovery Grant**

- *Forecasting large collections of related time series*
- \$540,000

2015–2018 **Australian Research Council Linkage Grant**

- *Forecasting electricity demand at the household level*
- \$320,000
